

Protect what you value.

McAfee Web Security Appliance

Powerful protection for your enterprise web traffic

The Internet, one of your most indispensable business tools, is also a major conduit for malware. Web-based threats can waste valuable resources by slowing down your network and productivity. Protect your enterprise against web-borne threats—spyware, phishing, viruses, and malicious web sites—so that you can use the Internet with confidence to grow your business. Control web access to maintain employee productivity, increase network bandwidth, and enforce acceptable use policies.

KEY ADVANTAGES

Threat protection

- **Detects and blocks spyware and other malware downloads with McAfee's award-winning scan engine**
- **Blocks web-based exploits**
- **Blocks access to malicious web sites**

Web control

- **McAfee Web Filtering Module (optionally licensed) lets you control access to web sites by category**
- **Easy to deploy because it is built into the McAfee Web Security Appliance**

Keep Threats Off Your Network

Your Internet gateway is your first line of defense for blocking spyware, malware, and drive-by exploits. McAfee® Web Security Appliance (*formerly McAfee Secure Web Gateway*) leverages McAfee's award-winning anti-spyware and anti-virus engines to scan all downloads before they enter your network. Independent tests demonstrate that Web Security Appliance blocks malware more effectively than any other product on the market.

Take web protection a step further with built-in McAfee SiteAdvisor®. It monitors, warns, or proactively stops users from visiting web sites that harbor spyware, phishing scams, or spamming agents. Built-in educational tools help users understand the type of malware each web site contains. SiteAdvisor goes beyond traditional URL filtering to deliver true web safety based on the actual behavior and reputation of each web site.

Control Web Access

With the McAfee Web Filtering Module (optionally licensed), you can manage web access to reduce your legal liability, improve your employee productivity, and preserve your network bandwidth for business-related activities. A built-in database of over 91 categories of web sites—including gambling, adult content, and media download—lets you control web access at a granular level. Allow, deny, or simply log web page requests for later review using the many reporting options available. Unlike competitors' products that require complicated, multi-server installation processes, McAfee Web Filtering is built into the appliance. It offers significant cost savings in deployment and management without sacrificing performance or features.

Comprehensive, Easy-to-Use Management

McAfee Web Security Appliance can be easily and centrally controlled with its built-in, browser-based management console. With a user interface that is optimized for efficiency and ease of use, you have increased security and management control. You can assign administration of different functions to different people within your organization. Three predefined administration roles are provided out of the box—super administrator, web administrator, and report administrator—or create your own custom administration roles.

ICAP Support

If you have an existing web-caching server that supports Internet Content Adaptation Protocol (ICAP), Web Security Appliance will seamlessly interoperate with it for optimum performance.

SPECIFICATIONS

Web Security Appliance model 3400

System configuration

- 1U server, 16.7" (W) x 1.7" (H) x 30.4" (D)
- Dual 146 GB hard drives (RAID 1)
- 8 GB memory
- Dual CPUs
- Remote (out-of-band) administration
- Dual power supplies
- Two 10/100/1000 Ethernet ports
- Two 1000 BASE SX fiber ports
- Supports both IPv4 and IPv6

"McAfee Web Security Appliance wins a Clear Choice award for keeping spyware from entering our network."

"McAfee's Web Security Appliance 3400 provides the most complete spyware protection we've seen to date from a gateway device." —Network World

Keep Viruses and Spyware Out of Your Network

- Maintain business continuity by preventing web-borne threats from clogging up your network
- Block viruses and spyware at the gateway before they infect your network and desktops
- Reduce cleanup costs by preventing threats from entering your network
- Scan all downloads via HTTP or FTP
- Safeguard confidential data by thwarting exploits that use keyloggers and spyware

Surf Safely with McAfee SiteAdvisor

- Forewarn users about malicious web sites that harbor spyware, phishing scams, or spamming agents
- In-depth content inspection and site testing go beyond traditional URL filtering to allow, warn, or block access based on content and spamming potential
- Educate users with intuitive safety ratings and threat profiles for web sites

Put an End to Inappropriate and Frivolous Web Surfing

- Preserve network bandwidth and improve security by blocking inappropriate or frivolous web use like gambling, shopping, and music downloads
- Enforce appropriate use policies and report on individual web-surfing behavior with our optional Web Filtering Module

Manage with Ease

- This self-contained solution with its hard-coded operating system and built-in, web-based management tool couldn't be simpler to manage
